Parents Med Guide Adhd by Inter-Varsity Press

**Parents Med Guide Adhd**
I began studying ADHD formally more than 20 years ago. During that time, I have also always had a clinic in which I would see kids and parents, usually for diagnostic evaluation when the situation was complex or unclear. Thus, I’ve been influenced both by my scientific experience and knowledge of the literature and by my encounters with hundreds of children and families and their very real ...

ADHD is one of the most common neurobehavioral disorders of childhood. It is usually first diagnosed in childhood and often lasts into adulthood. Children with ADHD have trouble paying attention, controlling impulsive behaviors (may act without thinking about what the result will be), and in some cases, are overly active.

Over my career, many referrals to my private practice, and most of my school consultations, focused on kids with ADHD and/or LD who exhibited behavior that was considered inappropriate, disruptive, rude, or oppositional. I wish I had learned earlier that the behavior of kids with attention or learning challenges was not a symptom of ADHD, but was instead a consequence of these conditions.
